Swing Shrouds

The Swing Shrouds have been designed to utilize the air velocity created by the rotating grinding wheel to efficiently channel dust particles away from the work surface and into the vacuum port. The Shrouds are made from an abrasive resistant, glass filled nylon plastic to prevent wear from the grinding process. The attached brush along the bottom edge of the shroud assists in dust control. The Swing Shrouds are easy to install on most popular grinders using the included adapters, spacers and quick release lever.

5" Swing Shroud
Fits 4" to 5" hand grinders using included adapters and spacers. For use with a 4" to 4.5" cup wheel or abrasive disc.

Installs easily on most 4", 4-1/2" and 5" grinders. Easily attaches to vacuums or dust extractors. Designed for 4" - 5" diamond cup wheels.

7" Swing Shroud
Fits 7" to 9" hand grinders using included adapters and spacers. For use with a 7" cup wheel or abrasive disc.

MK-304CG-1
MK Diamond’s wet/dry-grinding cup wheels have a unique shape which allows for superior form mark removal. Their lightweight design ensures fast surface grinding with a minimum of operator fatigue. Can be used wet or dry.

MK-304SG-2
The double row cup wheel offers twice as much grinding surface for faster removal. Perfect for concrete deburring and rough surface grinding. The lightweight design assists in reducing operator fatigue. Can be used wet or dry.

MK-504CG-1
Designed for quick de-burring and form mark removal. The turbo segmented design is ideal for cleanup and finish work.

MK-504SG-2
Designed for quick de-burring and form mark removal. The turbo segmented design is ideal for cleanup and finish work.

MK-704SG-2
Designed for high efficiency surface grinding and cleaning of concrete. They utilize a unique large format turbo segment design that maximizes diamond surface contact with the work surface resulting in fast and very aggressive material removal.

MK-804CG-1
Designed for floor preparation work prior to the polishing process. For grinding thick coatings, epoxy, urethane, and other membrane materials. The arrow shaped segment allows for scraping and grinding at the same time.
