MK Diamond Offers Pin Drill Bits for Porcelain

MK Diamond's Brazed Pin Drill Bits are designed for drilling porcelain tile, ceramic tile and hard stone. Through the innovative use of oil, these pin drill bits do not use water. The smaller diameter bits, 5/8" and smaller, are unique in that they have a hollow shank filled with oil. The oil acts as a coolant and lubricant, which makes for cleaner, dryer work areas. The oil is water-soluble and does not stain or drip. These bits can be used with battery-powered drills.

“Drilling through porcelain tiles may be difficult but necessary as porcelain is one of the most popular choices of tile material today. Using the correct bit is paramount to achieve the desired results. Utilizing brazing technology, these diamond tipped, pin drill bits produce fast and efficient cutting. Not only do these diamond drill bits drill through porcelain, they are also effective on materials such as marble, granite, travertine, slate, quarry tiles, ceramic tiles, natural stone and limestone,” states Brian Delahaut, Vice President of MK Diamond Products, Inc.

The drilling depth is 1-3/8" (35 mm). Pin Drill Bits 3/4" (20mm) and larger required a 5/8" - 11 shank adapter to use with 1/2" drill chucks or may be used on an angle grinder. The Pin Drill Bits will drill materials faster, produce a smooth surface finish and provide consistent results.
