## **Surface Preparation Grinding Machines**

“Surface preparation, polishing and staining are the fastest growing segments of the concrete industry. The process is multi-level, from cleaning and grinding concrete surfaces, applying paints and epoxies and polishing the concrete floors,” states Brian Delahaut, Vice President, MK Diamond Products, Inc.

MK Diamond is introducing two sturdy and reliable grinders, SDG-101 and SDG-103, for grinding or stock removal. They are compact and lightweight for easy use by the operator and it is simple to attach a 10” grinding head. The many features make them perfect for concrete projects.

The SDG-101 offers a one horsepower, 15amp, 110 volt motor and the SDG-103 has a 3 horsepower motor, 230 volt motor. Both have fully enclosed continuous duty, thermally protected, fan-cooled motors. Each machine can attach to a vacuum system to eliminate dust when dry grinding. Or there is a water control valve when wet grinding is preferred to keep the grinding heads cool. Both contribute to keeping the environment OSHA safe.

The unique shroud system for the SDG-grinders easily adjusts to suit segment height and floor angle. The shroud has a removable portion to enable the operator to grind near walls. The rear wheels can be extended for added lateral stability. The foldable handle makes the floor grinders more compact and convenient for transportation and storage. It can adjust for ergonomic comfort and makes the machine easy to operate. To ensure flat grinding, a bubble level is attached to the base.

“These grinders provide versatility, performance and value over other, more conventional grinders on the market,” concludes Brian Delahaut, Vice President, MK Diamond Products, Inc.

MK Diamond Products, Inc. has been American-owned since 1868. For more information call 800/421-5830 or visit [www.mkdiamond.com](http://www.mkdiamond.com).
